

aromen[®]
GreenSpace

Aromen GreenSpace creates a healthy air quality in life-, work- and public spaces using professional diffusers and aromatherapy blends.

Aromen GreenSpace purifies the air and supports the natural immune system

Aromen GreenSpace supports healthy airways and makes breathing easier

Aromen GreenSpace positively affects the mental state

Aromen GreenSpace is 100% natural and organic certified

A GreenSpace is a clean environment.

Through the use of essential oils, we can contribute to a clean, healthy, and pleasant air quality.

Plants produce essential oil to thrive in their environment.

Essential oils are, therefore, a natural product and consist of a complex composition of plant molecules. All these molecules help the plant fight bacteria, fungi, and viruses, and so survive in their environment.

By diffusing essential oils into the air, we can effectively and naturally enjoy the same purifying benefits.

A GreenSpace is a healthy environment.

Besides all the benefits that essential oils have for the plant itself, these oils also have a powerful impact on people.

Aromen GreenSpace creates an environment that directly benefits the physical aspects of health through improving the quality of the air we breathe and additionally positively affects our mental wellbeing.

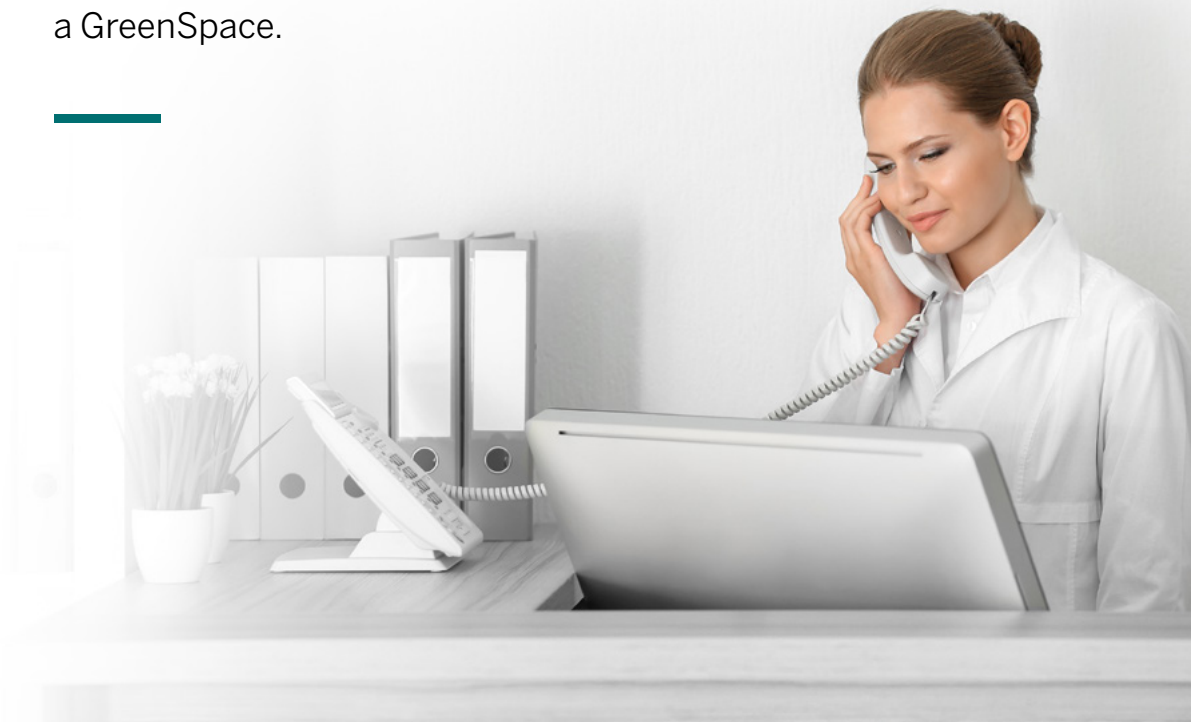

A GreenSpace is a pleasant environment.

We feel at our best in a clean
and healthy environment.

To support the feeling of well-being BioPure
blend combines the effectiveness of the
formulation with a pleasant natural fragrance.

Creating a positive, natural, and greener
environment. Or as we call it,
a GreenSpace.

Aromen GreenSpace Diffusers.

The Aromen GreenSpace diffusers are user-friendly and have a modern design. The one-time timer setting and the large essential oil tank allow the diffusers to function automatically.

Nanotechnology diffuses the BioPure blend into the air. This innovative technique allows the smallest possible particles to disperse into the air for optimal therapeutic efficacy.

Other advantages of this technique are a homogeneous distribution over the entire space with no residue and cost-effective consumption.

C-serie compact & flexible

C100:

For spaces of **100m³ - 150m³**

C200:

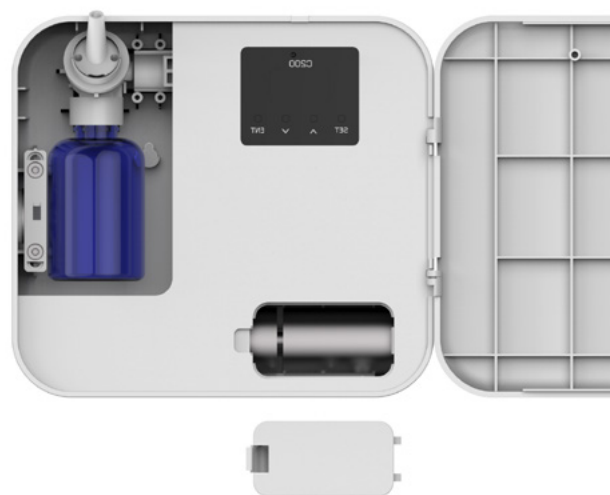

For spaces of **150m³ - 200m³**
